PROJECTS

Health-Mate, Doctor's Booking website

The HeathMate web application is designed to streamline the process of booking, managing, and attending medical appointments.

Technologies used: React, Node.js, Express, MongoDB

Github:<https://github.com/Priyanka-Lala/Health-Mate>

Vedic-Spice, Resurant website

The soul of a restaurant is captured on a website, which serves as a lively online storefront and provides an engaging experience similar to going in person. Highlighting the restaurant's history and distinctive offers, promoting events, and accepting bookings online are all important aspects.

Technologies used: HTML, CSS, Bootstrap 5, Javascript

GitHub:<https://github.com/Priyanka-Lala/Vedic-spice>

Weather-forecast App

Creating a weather app using Tkinter in Python involves designing a user-friendly interface where users can input their city or zip code. By integrating with a weather API like OpenWeatherMap, the app fetches and displays real-time weather data, including temperature and conditions.

Technologies used: Python, GUI Tkinter, and API

Github:<https://github.com/Priyanka-Lala/python-Weather-app>

Invoice Generating App

Tkinter-based GUI collects invoice details through user input fields, allows adding multiple items, and generates a formatted Word document using `python-docx`. The user-friendly interface helps create and manage invoices efficiently.

Technologies used: Python, GUI Tkinter, and API

Github:<https://github.com/Priyanka-Lala/python-invoice-generator>
